

Department of Commerce PECFA Program

Bid Round 65

SITE NAME: Oregon Andy's Tire & Muffler (Former)
COMMERCE #: 53575-1529-20
BRRTS #: 03-13-002215

Q: Are you requiring 2 or 3 inch asphalt to be installed?

3 inches of asphalt is being requested as part of the bid specification. For our purposes the asphalt should be placed on top of an 8 inch coarse material/aggregate preparation which is on top of the compacted fill area.

Q: What volume of pumped water should we use to calculate costs?

We're bidding the potential activity of pumping water as an 8- hour day for a pump truck and an operator. The hourly rate shall be used for determining the costs estimate. This all depends on the skill of the excavator, capacity of the pump truck, turn around times, weather, traffic, and so forth. The goal is to remove water from the excavation in order to make it feasible to excavate contaminated soil to the desired excavation footprint, not to remove x amount of groundwater from the excavation. Both agencies have to approve the use of the pump truck prior to work being conducted.
